

Q Transfer Cart

A flexible solution for manual transportation and distribution of items in production environments.

The non-powered transfer cart is designed for cross-transport and distribution of goods – for example, from machine lines to storage conveyors. It comes equipped with a stable roller conveyor and can be fitted with a push handle, load brake, and foot-operated parking brake, ensuring safe and easy handling.

Specifications	
Roller width	400 - 500 - 600 - 900 mm
Section lengths	1500 - 2000 - 2500 - 3000 mm
Height	300 mm

The cart is built for durability and can be adapted to different production settings. As standard, it is supplied in green or grey. A reliable solution for efficient cross-transport and flexible distribution of materials.

This version of the transfer cart is equipped with two parallel roller conveyors, making it suitable for handling larger or longer items. It can be supplied with both fixed and tiltable end stops to keep goods securely in place during transport. Manual operation provides flexibility and requires no power supply, making it particularly well-suited for areas without permanent installations.

As standard, the carts are supplied in green or grey and can be combined with accessories for additional functionality.
